

logic in reliability

Combining expertise, passion and software to deliver the total equipment reliability solution.

logic in reliability

Relcom is a key provider of high quality reliability services and software. We understand the link between equipment reliability and operating profitability, and have successfully applied this principle across a wide range of industry sectors.

Relcom can make measurable improvements to your organisation.

services

Relcom will tailor a solution that will exceed your expectations and requirements within your timescales and budget.

Included in our services portfolio are:

- strategic maintenance audits
- improvement plans and execution
- equipment reliability-based consultancy and assessments
- condition monitoring management
- spare part strategies and single-sourcing considerations
- capital justification and management

software

Merlyn is a powerful, flexible and user-friendly suite of reliability software from Relcom. It will define, design and optimise a cost based maintenance strategy, to maximise uptime and profit.

the relcom portfolio

Wherever you are on the scale from zero to total reliability, Relcom will analyse your organisation and produce strategies and actions that will make a sustainable difference. Our emphasis will be placed on a proactive and predictive approach towards all elements, including condition-based maintenance, spares strategies, operator-based maintenance and capital justification.

Although the functions within the total strategy may appear modular, Relcom will develop, optimise and integrate the functions into one aligned direction. For example, the stores, spare parts, projects and operational functions are all ultimately inter-dependent.

Relcom will therefore apply this unique approach to make a positive impact on your bottom line.

portfolio at a glance

- plant maintenance audits
- continuous improvement programs
- stores and spares strategies
- condition monitoring definition and management
- criticality assessments
- operator-based maintenance
- CMMS implementation, optimisation and integration
- root cause failure investigations
- capital justification
- inter-departmental behaviour and integration
- resource optimisation
- risk-based maintenance strategies
- all cost aspects within maintenance
- Merlyn software and related services

merlyn

Merlyn is a unique system that can be applied with equal success across any sector and all types of equipment. It will tease and capture valuable information from the workforce and build it into predictive activities, storing this information forever. In this way, failures will be eliminated by executing simple yet science-based, and cost-effective actions at early stages of potential equipment degradation.

The overall organisation will benefit from this effective, efficient and empowered approach.

merlyn at a glance

- user-friendly
- powerful
- flexible
- proven
- thorough
- fast
- cost-based and cost-effective
- high quality

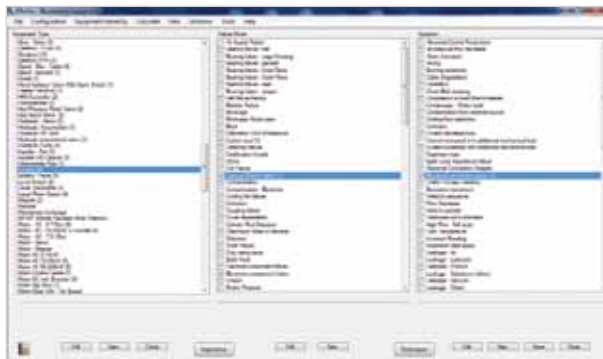

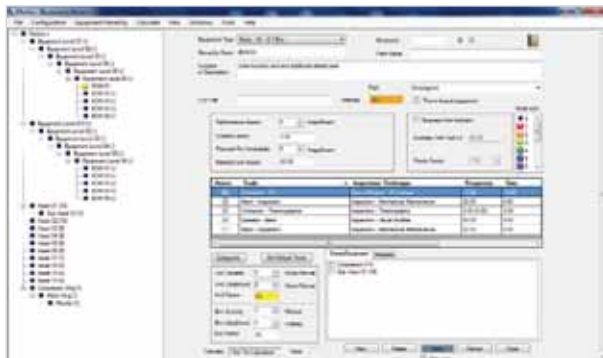

sectors

Merlyn has been successfully applied in the following sectors:

- pulp and paper
- food and beverage
- petrochemical
- power generation
- automotive
- mining
- general industry

Merlyn – specialist technology

Merlyn combines .NET technology in conjunction with standard MS SQL database platforms to achieve a world-class application. Merlyn will successfully run on WINDOWS XP, Vista and 7 environments and can therefore integrate with applications and databases of equal technology and quality.
